

- Define: Remote Data
- RDO (Remote Data Objects) is an application program interface (API) from Microsoft that lets programmers writing Windows applications get access to and from both Microsoft and other database providers. In turn, RDO statements in a program use Microsoft's lower-layer Data Access Objects ([DAO](#)) for actual access to the database. Database providers write to the DAO interface.
- List at least ten (10) locations where one can find/get remote data and/or what could be used as remote data

KendoUI

Everywhere I looked I only could find remote data entry jobs or telecommuniting / part time data entry jobs.

- Waze
 - The Waze App is a GPS app like Apple Maps, or Google Maps. Waze uses “crowd sourcing” techniques to allow users to update if they are in traffic, see cops, etc. The users input the information into the app and then it distributes the information out to all the other apps running in realtime.
- New York Times App
 - The New York Times App takes in rss feeds from the NYTimes websites and puts it on the app so the user can read the news from their mobile devices.

Step #2:

What is online data backup (remote data backup)? - Definition from WhatIs.com.
